**Prevent hearing damage**

QuietOn

ACTIVE NOISE CANCELLING EARPLUGS

 Designed in Finland, made in EU

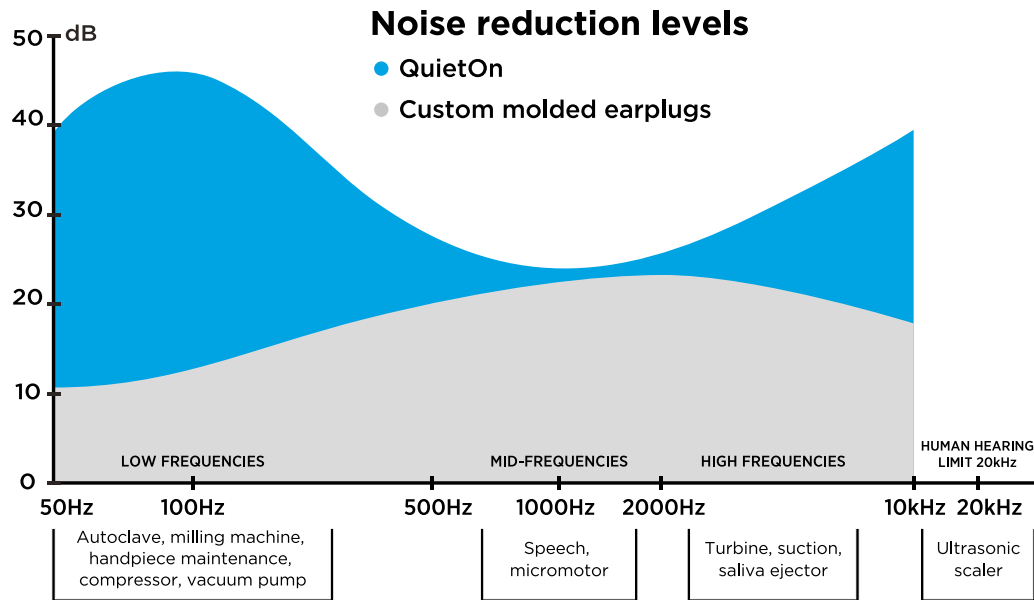

**Certified hearing protector EN-352**

# Hearing protection in dental care

Dental professionals (dentists, hygienists, technicians etc.) are exposed to dental noise from several sources. Various studies show evidence of damage to hearing caused by dental noise.

High noise levels and resulting consequences such as irritation and delayed stress, tend to be ignored, simply because we become accustomed to these noises and pay no attention to this hidden risk for hearing loss.

Nevertheless, the damaging effects of continuous dental noise exist.

*This chart illustrates reduction levels of dental noise while using QuietOn active noise cancelling earplugs or custom molded earplugs. The data was measured up to 10.000Hz (=10kHz).*

# Benefits for dental professionals

**Allows communication between patient and staff**

**Increases focus during treatments**

**Decreases noise and daily stress**

**For patients**  
 › decreases scary noise and stress

**Very effective in low and high frequency noise**  
 › reduction up to -40dB
