" A revolutionary concept in complete denture prosthetics"

Printing Resins For Digital Dentures

For more information please contact:

Ardagh Dental Supply Unit 4 Docklands Innovation Park East Wall Road, Dublin 3, Ireland T: 01 855 1600 Tasso Sambanidis M: 087 284 7795 E: <u>info@ardaghdental.ie</u>

SR Ivobase® Injector

The innovative prosthetics system

This precision polymerisation system is easy to use; the quality of the results is exceptional. The system is based on a highly effective combination: The material is matched to the polymerisation unit and vice versa.

- "All-in-one" injector, quick and easy setting into operation possible
- Controlled polymerisation shrinkage for optimal accuracy of fit
- No water and compressed air connection necessary (plug and play)
- Compact, modern and ergonomic design; requires only a small space
- OSD indicator: current operating status visible from a distance
- RMR key for a clear reduction of the residual monomer content
- USB port for software updates via PC/Internet

After 35 years of producing quality prosthetic appliances, I can say that the IvoBase Material is without doubt one of the best injectable materials that we have ever used. It gives outstanding results, both in the fit and stability without compromise, time after time.

Richard Egan, DT, Great Britain

SR Ivocap[®] High Impact

For complete dentures, partial dentures and relines.

Shades: Pink, Pink-V, US-L, US-P, S, Preference, US-D, Pink-V Implant, Preference Implant

SR Ivocap[®] Clear

For orthodontic appliances, palatal plates and bite guard splints.

IvoBase[®] Hybrid

· Shades: Pink; Pink-V; Preference; Clear.

With heightened opacity: Pink-V Implant;

For all removable dentures.

Preference Implant

Ox Capsules

20x Capsules

SAVE 20%

SR Ivocap[®] Elastomer

For positioners, mouth guards, soft bite guards and snore guard applications. Shade: Clear

IvoBase[®] High Impact

For immediate dentures & implant retained dentures.

 Shades: Pink; Pink-V; Preference. With heightened opacity: Pink-V Implant; Preference Implant; 34-V

ProBase[®] Cold

Suitable for both pouring and packing techniques. Its excellent properties ensure long-lasting denture bases.

 Shades: Clear, Pink-V, Preference & US-L

2x 500g/500ml

ProBase[®] Hot

Sets a high standard of quality with regard to the processing properties, accuracy of fit and stability of shape and colour of heat-curing denture base materials

 Shades: Clear, Pink, Pink-V, US-L & US-P

628518EA Includes 2 flasks, temperature checking set and thermo glove

Stratos 100

The Average-Value Articulator

The Stratos 100 is the efficient averagevalue articulator with very convenient handling and the basic features necessary

for accurate articulation and fabrication.

Stratos 200

The Semi-Adjustable Articulat

The Stratos 200 is a semi-adjustable articulator with various setting options due to exchangeable joint inserts. It has been

especially designed for use with lvoclar Vivadent tooth ranges.

Stratos 300 The Individual Articulator

The Stratos 300 is a state of the art precision articulator with individual setting options. With its wealth of possible variations,

it represents the optimum basis for exact functional simulations for demanding, highquality restorations.

acebow

Gnathometer

Gnathometer "M" (incl. UTS Adapter) is an intraoral registration device that enables you to determine the occlusal position of edentulous patients. Needle-point tracing is used to check the occlusal position quickly and easily. The precision of this technique is particularly important in the fabrication of implant-supported dentures.

3D setting-up template

For correct tooth set-up of personalised models in conjunction with the transferbow taking the Spee and Wilson curves into account.

voclar

FLEXISTONE PL

SR Ivolen

This stable non-stick multi-purpose tray material is characterised by its optimum setting phase. It can be used with all dental impression materials applied with adhesives.

ivoclar

vivadent:

Separating Fluid

5 litres

Separating Fluid demonstrates excellent separating properties and therefore optimally isolates all Ivoclar Vivadent denture base materials and ensures smooth surfaces.

Elite LC Tray

Light-curing resin plates for making special and functional trays. Bite plates, bases for prothesis tooth mounting, fixing plates for registration devices

DETAX | d e n t a l |

Flexistone[®] Plus Insulating and modeling material

A-silicone based, light bodied, excellent stability, very high final hardness (85 Shore A). Optimum flow properties during spatulation. For insulating dentures during investing. Protection of acrylic teeth against plaster. Easy application - 1:1 mixing system. Especially indicated for use with injection moulding techniques, recommended by IVOCLAR for the SR-IVOCAP System.

Qu-Resin

Assortment:

- 50 ml Qu-Resin pink cartridge - 12 mixing cannulas

- 10 ml Qu-connector

Available in Dentine or Pink colour

Quick-setting, self-curing denture repair resin based on diacrylate for intraoral and extraoral use.

Qu resin is the perfect material when it comes to speed and can be used for standard processing in the dental laboratory and for direct use in the dental practice. Tension free oral fixation is made possible using Quresin. Qu resin is available in pink and dentine.

Impression

AccuDent[®] XD

A two viscosity alginate impression material for complete and partial denture impressions.

This system includes two dual-phase alginate materials (tray and syringe) for more accuracy and precision than traditional alginate impression materials and a thermoplastic heat mouldable tray system for both dentate and edentulous impressions.

The alginate tray and syringe gels have different viscosities, but are chemically compatible and are designed to work harmoniously in the mouth to create impressions with outstanding accuracy and detail.

Ideal for the fabrication of custom impression trays, cast metal frameworks, orthodontic appliances, opposing models, removable dentures, and many other types of dental cases.

- Colour changing properties for precise timing of impression taking
- Disposable trays to prevent cross contamination and to meet high OSH standards
- Includes Tray Adhesive for optimal bond between tray and alginate

Restored immediately using retention.sil

Immaterial whether stud, retention.loc or TiSi.snap. With retention.sil, bredent medical offers a unique prosthesis silicone which can be used to softly line the prosthesis for the duration of the healing phase.

This lining cushions the chewing forces and absorbs the load peaks. As a result, successful healing is ensured.

Varseo XS

The compact DLP 3D printer - specially developed for dental uses

- Cost-effective, high-resolution DLP 3D printer with outstanding detail accuracy
- · Building speed independent of the number of elements to be produced
- · Handy building platform-printing of multiple-unit bridges up to eight units or a quadrant model possible
- · Network capability via WLAN or Ethernet connection allows fast and uncomplicated data exchange to the PC
 - Compatible with a wide variety of materials:

VarioSmile Crown VareoSmile Temp VareoWax Model VareoWax CAD/Cast

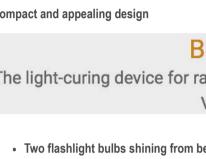

- · Replaceable resin tank allows easy material change
- Compact and appealing design

BEGO Otoflash

The light-curing device for rapid and reliable light-curing of VarseoWax and VarseoSmile resins

C BEGG

- · Two flashlight bulbs shining from below into the polymerisation chamber and hence makes short resin light-curing times possible
- Wide wavelength field ensures very good resin hardening and hence achievement of the final physical characteristics of the printed objects
- Protective gas equipment prevents oxygen inhibition, guarantees completely adhesive-free surface curing and hence efficient reduction of the residual monomer content and biocompatibility
- Device can be used for photo polymerisation of all materials that harden under light at wavelengths between 300 to 700 nm

PCU LED N2

VeriBuild LCD - NEW Printer

Meet the VeriBuild LCD Printer, with features rarely seen in economically priced printers. Your lab or dental practice can now print extremely precise models and accurate surgical guides with slice thickness between 25 - 100 microns. This open system printer is able to print 405nm print resins using the proper file with its advanced software. Whether this is your first 3D printer or an add-on for increased product, you can count on consistently high print quality and high accuracy at an affordable price for any lab - big or small.

Some of the VeriBuild 3D Printer's features:

- Open Material System
- **High Resolution 47um**
- **Complete Workflow Solutions**
- **Advanced Software**
- Wi-Fi Enabled
- Smooth Surface Printing
- auto Calibration

What's Included?

- 1 Alpha 3D Nesting Software (No annual fees!)
- 2 Spare LCD panels
- 2 Resin Vats
- 1 Build Platform
- · 2 Resin Vat film sheets

3D printing Curing

Laboratory unit on LED-basis for the curing of 3D printed parts. Ensuring of mechanics and biocompatibility through effective deep curing. Two different curing environments selectable depending on the application area. The additionally eligible nitrogen environment of PCU LED N2 ensures cured components without inhibition layer - for laboratory and medical devices.

Highlights

- Open system with 10 freely programmable memories
- Easy operating concept with electronic control system
- Logging and monitoring of the process parameters

Ivory

Golden Brown

White

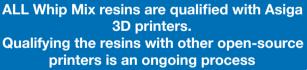

VERIMODEL[™] OS

VeriModel[™] OS is a printed model material that offers the dental laboratory a high quality surface finish and extreme precision. The three colors can be used for a variety of 3D-printed applications, including the production of highly accurate working and presentation models for crown and bridge, prosthetics and orthodontic work.

VeriModel[™] OS provides the lab and dentist with all of the advantages of 3D printed models, including reliable accuracy, fine detail, and clean, smooth surfaces.

- VeriModel[™] OS Ivory offers a natural colour that gives a visual contrast to waxes, but doesn't influence the colour of tooth-coloured restorative materials. VeriModel[™] OS Ivory is formulated for use in a DLP 385nm and 405nm printers.
- VeriModel[™] OS Golden Brown offers a warm colour which provides a visual contrast with restorative materials and makes seeing margin and anatomical detail easy. Compatible with both 385nm and 405nm printers.
- VeriModel[™] OS White enables you to print beautiful true-white orthodontic models with a detailed, accurate surface finish. VeriModel OS White is formulated for use in a DLP 385nm and 405nm.
- VeriModel[™] OS Grey is highly accurate, stable, provides high detail resolution, low shrinkage and long-lasting toughness. VeriModel OS Grey is compatible with both 385nm and 405nm printers.

VeriTray™ resin is biocompatible and perfect for your custom trays. It is extremely accurate, works well with all types of impression materials, prints very fast, is rigid, and is neon green. Ideal trays for precise final impressions.

VeriTray[™] can only be printed in 385nm 3D printers.

- Formulated for use in DLP 385nm printers only
- Extremely accurate
- Rigid

VERITRAY™

- Prints very fast
- Neon green colour
- Use all types of impression material

Perfect match.

3D printing FotoDent_® resins

FotoDent® denture 385 nm (colours: pink transparent or pink opaque) Light-curing resin for the production of denture bases. The material provides for accurate results with an outstanding dimensional stability. FotoDent® denture is MMA-free and stable of colour.

1 kg bottle

FotoDent® model 385/405 nm

Light-curing resin for the manufacturing of dental models for orthodontic and prosthetics. High form and break stability . Abrasion, moisture and light resistant.

FotoDent® model2 385 nm

Especially developed for new generations of printers with 385 nm: Light-curing resin for the manufacturing of dental models for orthodontics and prosthetics. Faster printing process due to higher output, still with the same precision.

FotoDent® setup 385/405 nm

Light-curing resin for the manufacturing of orthodontic set-up models. The material is above all characterised by its increased building speed. The set-up models are very well suitable for the thermoforming technique.

1 kg bottle

FotoDent® tray 385/405 nm

Biocompatible light-curing resin for the manufacturing of dental impression trays. High reactivity at low viscosity. The finished impression trays have a homogenous surface, which significantly reduces manual reworking.
